Dear Ms. Fry,

This is to acknowledge receipt of your email to the Public Service Commission of South Carolina. I am forwarding your email to our Clerk's Office for processing. Your email will become a part of Docket No. 2013-59-E and will be posted on our website under this docket.

Please let me know if you should require any additional information.

Sincerely,

Deborah Easterling
Administrative Assistant

South Carolina Public Service Commission

Dear Public Service Commission,

Duke should quit investing in dirty, old energy like coal and nuclear, and actually invest in the cheaper renewable technologies its executives claim to support. I want the Carolinas to be more energy efficient and powered by local wind & solar that will employ thousands of Carolinians.

We must draw the line somewhere. We cannot allow industries like Duke Energy to set the helath and environmental standards for our communities by strong-arming government agencies to rubber stamp their dirty energy plans! Please think of all the citizens of this state and consider long-term costs as opposed to short-term benefits for an industry or a political campaign.

Sincerely,

Peggy Fry

Dear Public Service Commission,

Duke should quit investing in dirty, old energy like coal and nuclear, and actually invest in the cheaper renewable technologies its executives claim to support. I want the Carolinas to be more energy efficient and powered by local wind & solar that will employ thousands of Carolinians.

It is obvious that the way of the future is solar power and photo voltaic cells. This is the type of technology that Duke should be investing in, both to provide their customers with the most available and economical energy, and for their shareholders, in order to maintain a healthy business and profits in this quickly evolving sector.

Coal power is the way of the past, and investing money in it will only be throwing money down the drain, while avoiding the new science and direction of power.

Sincerely,

Deja Lizer
